

# Blue Detectable Catering Plaster Strips – Metal Detectable - Pack of 100

## Specification Sheet

## Product Description:

Blue Detectable Catering Plaster Strips are specifically designed for use in food processing, catering, hospitality, and hygiene-critical environments. Their high-visibility blue colour ensures quick visual detection, while the integrated metal strip allows detection by metal detector systems—helping prevent food contamination incidents before they become expensive recalls.

Manufactured with a hypoallergenic adhesive and cushioned non-stick wound pad, these plaster strips provide secure protection for minor cuts and abrasions while remaining comfortable during extended wear. Washproof and air-permeable, they are suitable for daily use in demanding work environments where hygiene and compliance are non-negotiable.

Ideal for HACCP-controlled facilities, commercial kitchens, bakeries, abattoirs, and food production lines.
